

[C019-]320212 Software Engineering - Assignment 2 -

P. Baumann

Deadline: 2017-mar-08 23:59

0 Submission

Mail **text solutions** (accepted formats: PDF, MS-Word, LibreOffice) to one of the TAs:

Lazaj, Kejsi k.lazaj@jacobs-university.de and Rakipi, Frenci f.rakipi@jacobs-university.de .

Submit **code results** to the course repository under your account – only what’s there will be graded.

1 Qt Installation and Test

Download and install the Qt framework on your computer.

Connect it to the repository on ClamV using your account there. (Have none? Contact TAs or directly Dr. Achim Gelessus).

Find out how the integrate text editor works, how to compile, link, and run a program, how to document, and how to write results into the repository under your account.

Do this on the basis of a simple program that accepts a string (such as “Hello world!”) and writes it to a text file.

Hint: Generally, and as can be seen from the above task, more or less details may be left open. In such cases, make reasonable design decisions and document them clearly. Or ask the list for details you need.

Deliverable: In your personal repository,

- The source code of the program
- Documentation
